Alessandro Vozza

AI Transformation Leader | Agentic Systems Architect | Future of Work

LinkedIn: /in/alessandrovozza | GitHub: @ams0 | Amsterdam, Netherlands

---

Summary

I build production AI systems — not decks. For the past two years I've been designing and operating agentic workflows where AI agents hold real responsibilities: owning tasks, making decisions, and replacing hours of human work daily. I come from large-scale infrastructure transformation (Microsoft, Red Hat, Shell, Rabobank), but my focus has shifted to something more fundamental: redesigning how humans and AI agents collaborate at org level. I understand team topologies, decision rights, and workflow design as deeply as I understand the underlying models and APIs. I can speak to engineers, executives, and everyone in between — and I've done it across global organisations. I don't prototype. I ship.

Recent Projects

Agentic AI Automation Platform *(2024–present)*

Built a personal production AI agent system using Claude/Anthropic APIs that runs real workflows: calendar management, communications triage, research pipelines, code generation, and decision support. Agents hold end-to-end responsibility for tasks — no human in the loop for routine work. System replaces 3–4 hours of manual work daily. Stack: Claude API, custom orchestration layer, event-driven triggers, structured memory. This is the kind of system Prosus needs at portfolio scale.

Internal Developer Platform for 15 Engineering Teams *(2023–2024)*

Designed and shipped an IDP using Backstage, GitHub Actions, and OSS tooling that standardised delivery workflows across 15 teams. Outcome: reduced onboarding time by 60%, eliminated shadow IT, and gave leadership real-time visibility into team health and deployment frequency. Org design as much as engineering.

AI Inference on Kubernetes *(2024)*

Built on-demand AI inference and training infrastructure using OSS tools on GPU-enabled AKS clusters. Enabled data science teams to self-serve model training without infrastructure bottlenecks — shifting AI from centralised IT dependency to team-owned capability.

Kubespaces.io — Namespaces-as-a-Service *(2024–present)*

Founder-built startup delivering on-demand ephemeral and production Kubernetes environments. Designed for developer self-service at scale. Pitched to investors and presented at conferences internationally.

Multicluster Progressive Delivery *(2023)*

Architected zero-downtime deployment pipeline using ArgoCD, GatewayAPI, and Istio across multiple clusters. Outcome: 100% uptime during deployments, full rollback capability, and delivery confidence that changed team behaviour.

Skills & Certifications

AI / ML: OpenAI APIs, Anthropic/Claude, Gemini, MLFlow, Kubeflow, agentic workflow design, LLM orchestration, prompt engineering, AI system observability

Platform & Infrastructure: Kubernetes (Golden Kubestronaut), Azure, AWS, GCP, Docker, Terraform, GitOps, Ansible, GitHub Actions, Backstage

Observability & Security: Datadog, Prometheus, Grafana, DevSecOps, zero-trust architecture

Org & People: Team Topologies, org design, workflow redesign, decision rights frameworks, cross-functional coaching, executive communication

Languages: Python, Bash, Go (working knowledge), YAML (fluent 😄)

Certifications

- Golden Kubestronaut (Linux Foundation)
- Azure Solution Architect Expert (Microsoft)
- Azure DevOps Engineer Expert (Microsoft)
- Azure Security Engineer (Microsoft)
- Google Professional Cloud Architect
- AWS Cloud Practitioner

- GitHub Copilot Certified
- Microsoft Certified Trainer
- Green Software Foundation Champion

Experience

Microsoft - Sr. Solution Engineer Cloud + AI Agents and Applications

2025–present | *Amsterdam*

As a Microsoft Sr. Solution Engineer Cloud, I own and win complex technical decisions on behalf of our customers and partners, demonstrate the value of Microsoft's cloud service and help organizations trust Azure for their workloads, tools, and data. As a Technology Specialist in Digital Application & Innovation, I'm at the forefront of cloud-native architecture, artificial intelligence and integration services.; it translates to designing systems that fully leverage the unique capabilities of the cloud, such as scalability, automation, and cost efficiency.

Kubespaces.io — Founder & CEO

2024–present | *Amsterdam*

Founded and built a Kubernetes namespaces-as-a-service startup from zero. Designed the product, built the MVP, handled investor relations, and represented the company at international conferences. Running a startup means making org decisions daily: who does what, what gets automated, what requires human judgment. That lens has sharpened how I think about human-AI division of responsibility.

Independent Consultant Architect

2018–present | *Amsterdam*

Transformation engagements across Rabobank, Atradius, Shell, and Sonoma. Each engagement involved not just technical change but organisational change: new workflows, new team structures, new decision rights. Shell: cloud migration strategy and execution for global infrastructure. Rabobank: secure cloud-native platform design. Atradius: GitOps adoption and delivery transformation. Consistent pattern: technology is the easy part. Changing how people work is the hard part — and that's where I've focused.

Solo.io — Senior Platform Advocate

2022–2024 | *Remote/Amsterdam*

Led GTM for Istio-based service mesh products across enterprise accounts. Translated complex distributed systems concepts for C-suite, engineers, and everyone in between. Produced technical content, ran workshops globally, and drove product adoption through community and education. Demonstrated cross-functional influence at scale.

Microsoft — Principal Software Engineer

November 2016–December 2022 | Amsterdam

Led large-scale Azure and cloud-native transformation programmes for enterprise customers across Europe. Responsibilities spanned architecture, delivery, and organisational change management. Designed automated infrastructure platforms, secure software delivery pipelines, and cloud operating models. Worked directly with CTOs and engineering leadership to shift not just technology but team structure and culture. This is where I developed the instinct that transformation is an org design problem, not a tools problem.

Linux Foundation — Certified Trainer

2018–present

Delivered Kubernetes and cloud-native training programmes internationally. Trained hundreds of engineers across skill levels. Developed curriculum and adapted delivery for diverse technical audiences.

Red Hat — Principal Architect, OpenStack & OpenShift

2012–2014 | Amsterdam

Designed and led OpenStack and OpenShift deployments for enterprise customers. Early cloud-native transformation work — building new infrastructure paradigms before "digital transformation" became a buzzword.

Education

Ph.D. Chemistry — University of Amsterdam, 2004–2008 *Quantitative research, statistical modelling, complex systems analysis. Still useful.*

Languages

- **Italian** — Native

- **English** — Fluent (professional)
- **Dutch** — Professional working proficiency

Personal Interests

Dutch Cloud Native & AI Community — Organiser since 2007. Built one of the Netherlands' most active technical communities from the ground up. Ran Kubernetes Community Days Amsterdam 2019–2023. Community building is org design at small scale.

Continuous learner. Conference speaker (KubeCon, CloudNativeCon, local meetups). Occasionally writes about the intersection of AI systems and how humans work.
